

# YourNest leads \$750K Pre-Series A funding for Arya.ai

*Third round of investment by VentureNursery members for its 2014 graduate InvenZone founders*

**Mumbai December 22, 2015**

---

Arya.ai, an Artificial Intelligence (AI) start-up has raised Pre-Series A funding of \$750K from YourNest Angel Fund and VentureNursery members. Arya.ai offers its deep learning algorithms for developers to build intelligent AI systems.

These funds will be used to accelerate product development and to grow the AI ecosystem. This is the third time VentureNursery members have participated in the funding process.

While most companies and developers want to use AI in their applications, building an intelligent AI system involves solving many complex steps right from creating 'Intelligence' to managing the complex 'Dev Ops'. This time-consuming and resource intensive effort in building strong intelligence systems poses a big challenge.

Arya.ai started by two IIT Mumbai researchers Vinay Kumar Sankarapu and Deekshith Marla solves this problem for developers. Arya.ai as a platform provides advanced AI tools offered as modules in 'Language', 'Vision', 'Speech' and 'Reasoning' for developers. They can start building AI computing systems by assembling the modules and giving the relevant knowledge base for the machine to learn.

Arya.ai uses complex Deep Learning Algorithms to develop General AI systems that can adapt and learn to multiple use cases with minimal inputs from humans. These systems become better and better with experiences and learning.

These modules can be used in building intelligent AI systems for a vast number of use cases in multiple verticals -- right from creating an AI assistant for radiologists to creating a 'bot' to automate the customer experience handling.

Arya.ai has been working with developers across verticals like Travel, Research, e-Commerce, Customer Care, Medicine and Banking and will soon address other verticals like Automobile, Military and Defence.

"Using AI, developers can build applications that can solve most complex problems. However, the biggest pain point in building reliable AI applications is solving multiple challenges they encounter in the process," says Vinay Kumar, Founder and CEO of Arya.ai.

"Arya.ai, as a platform addresses this key problem for developers and organisations by bringing the most complex technologies from the labs, simplifying it and enabling developers to work on amazing possibilities of AI," adds 25-year old Vinay Kumar.

Girish Shivani, Fund Manager at YourNest Angel Fund says, “We are excited about the opportunities Arya.ai is creating in the way humans interact with machines. A modular platform, with ready to integrate modules can accelerate adoption of AI in day to day life and bring immense value to the end user,” he says. Post this investment Shivani is joining Arya.ai as a board member as a nominee of YourNest.

Samir Shah, Investor and Board Nominee from VentureNursery who has seen Vinay and team build an effective Deep Learning platform for the last two years says, “We expect Arya to impact millions of end users as an Artificial General Intelligence (AGI) companion, and improve their ability to make better decisions, especially in complex areas of science and medicine. We are delighted to back a team that promises to be a global player in AI.”

“Over the next few years, we expect AI to become ubiquitous in our daily lives making us more efficient. The man machine interface will evolve to a level wherein tasks that take time but utilise our innate intelligence and thinking capability only to a limited extent will be seamlessly automated, thereby making us more productive”, adds Girish Shivani.

“In the next five years, we expect to see more intelligent machines that understand us and relieve us of routine tasks. These AI systems can revolutionise the way we work as professionals and individuals”, says Vinay Kumar. “By joining hands with developers, Arya.ai aspires to build world class AI systems that can amplify the human abilities and efficiencies.”

Recently, arya.ai became the first Indian start-up to be selected worldwide by French innovation agency Paris&Co as one of 21 companies that do standout innovations. This comes just six months after Arya.ai was named among the top four next generation technology start-ups by ‘Silicon Valley Forum’ held at Microsoft’s US campus.

### **About Arya.ai:**

Set up by two researchers from IIT Bombay, Vinay Kumar Sankarapu and Deekshith Marla, the Arya.ai. team includes researchers and scientists in ‘Mathematics and Computing’ with expertise in ‘Artificial Intelligence’. The Arya.ai team’s research experience spans BioTech, Finance and Computing.

It was founded in 2013 with the mission of making machines intelligent to assist humans in faster and effective decision making in their professions. Since then Arya.ai has been investing its resources in developing a true technology solutions with a bigger impact on global audience.
